

Please do not restrict satellite radio content. It is very valuable to get current and accurate weather and traffic when I am traveling, especially when I am outside of my local market and am not familiar with the channels that would provide me that information.

Having this content is crucial, especially if there is harsh weather in a part of the country where I may have family members. It allows me to listen in on any damaging situations that they may be facing.

I oppose HR 4026.
